

**★★★★★HOT GOLD ROULETTE★★★★★**

**Much rubbish has been written about the Casino game of Roulette and believe me I have read most of it during my 50 plus years of playing in Casino's all around the world. In fact I have one of the world's largest collections of books, papers and computer files on the subject.**

**Generally it is believed that a player cannot win at Roulette and that roulette wheels are perfect random number generators. The Casino does have a mathematical advantage of 2.703% on a single Zero wheel and 5.263% on a double Zero wheel.**

**But don't believe the disbeliever's who say that the Casino table game of Roulette can't be beaten, it can, I have beaten it for many years on occasions for up to 10 visits in succession, I will continue to do so and so can you.**

**You must believe though that the game of roulette CANNOT be beaten solely by a staking system because the Casino operators will have in place a suitable minimum to maximum bet spread to protect their advantage, assuming that the wheel is a perfect random number generator.**

**The unique aspects that determine our success are, the human interference factor of the Croupier spinning the wheel and the ball, the physical factors that can cause long and short term wheel bias and the factors involved in the Law Of Cycles.**

**Of course none of these are associated with the use of hand held computers to calculate the wheel speed and the ball speed and then identify the ball drop point and the strike point on the wheel leaving only the bounce and scatter to be dealt with by an offset determined by the player. I have had many years of close involvement with the development of the world's best micro roulette computer however use of such a device is illegal in many jurisdictions and will not be covered here.**

**Now from these comments I hope you will have determined that computerised roulette cannot be beaten, we need a live Dealer/Croupier plus a particular wheel type. Please continue to question my statement if you will, that the Casino table game of Roulette can be an ongoing profitable and enjoyable experience and allow me present you with sufficient information to permit you to educate yourself and eventually convince yourself that my declarations are correct.**

**Your first questions should be Why should I do this? Why should I share this information with anyone, especially for \$5?**

**Well I don't need any more money than I already have to maintain my current enjoyable lifestyle for as long as I might live, I have always worked for the good of the community, and I love the challenge of helping smart little people beat the greedy conglomerates. That is why I want to teach you how to financially benefit**

## How to financially benefit from a little known unbelievable strategy!

---

from this little known strategy that was first developed exactly 50 years and has been refined and practiced by myself ever since.

In a perfect game of “American” or European roulette on a single zero wheel, if you were to play a single chip each spin you would, on average, invest 37 chips lose 36 times and win 1 time (there are 36 numbers plus zero i.e. 37 pockets) but for your win you would receive 35 chips from the Croupier and still have your original bet on the table which you can retrieve meaning that on average you would lose 1 chip in every 37 spins or giving the Casino a 2.703% average edge over the players.

In practice the house has a much greater advantage because most players continue to re-invest without a winning advantage until this house edge has eaten up their stake or bank including any winnings they may have accumulated. The Casino also has the crazy impatience of most roulette players working for it, just watch them rushing and scrabbling to place their chips on the table before the croupier calls No More Bets.

My strategy works equally as well on the American double zero wheels and on the Asian number wheel layout because it is based on the pockets and the metal frets that separate them and the moisture and temperature of the Croupiers fingers.

It works best on the older high fret wheels, adequately on low fret wheels, not quite as good on the new low fret wheels with stone ball tracks and not at all on the stupid aluminium dished pocket wheels which I refuse to play with the same aversion that I give to computerised roulette games. Refer to Appendix A below.

An important aspect of any playing strategy for most people is that it must be practical and players need not be freaks with some gift of memory, endurance or unlimited bankroll to benefit from it.

My strategy that I wish to share with you requires only one thing a little out of the ordinary – a little more PATIENCE than the average Casino patron exhibits. Can you develop that? If so welcome to the world of the financially contented!

Naming my strategy. You may have read or heard people talking about “Hot Numbers” and that was the name given to a similar strategy by the original developer, a well known wealthy and very clever man born in England 1910 and died in Canada in 1978. So I have called my strategy HOT GOLD!

This strategy, note that it is not a System or a wagering progression, selects on long term average one winning number from each 30 numbers played and this is a giant 16.666% advantage for the player and against the house.

OK I can hear you saying - “If it’s so easy, how do I do it? Get me started, let me at them, I want to toss my job, I want to be rich for life, play all day and never work again.”

Whoa! I never said it was that easy, I said it must be practical, but it also must

be practiced and never forget you must have patience.

### **HOT GOLD NUMBERS**

1. One that has NOT come up for at least thirty consecutive spins. i.e. 30 spins or more.
2. One that after such an "establishing period of absence" finally came up.
3. And one which did so TWICE MORE during the next 19 spins or less SUBJECT to the special exceptions below.

**That is three shows in 20 spins or less after an absence of 30 spins or more.**

**We bet those numbers to show up a fourth time within 13 spins and pay us a 35 to 1 dividend on our bet.**

A qualifying playable number will show up about once or twice each hour so this is where your patience is required.

In most Casino's you can take the chance that the recent number display is accurate and seek a number that has not showed for about 20 spins which will help curb your impatience.

In the larger busy Casino's you can monitor up to four tables at once which will provide you with betting action quite quickly but once you have a qualifier only attempt to play that one table.

### **SPECIAL EXCEPTIONS:**

- i. A number is NOT playable if it comes up three times in a row unless its two neighbours have also been absent.
- ii. A number is NOT playable if the DIFFERENCE in the 'gap' between the first and second appearance and the 'gap' between the second and third appearance consists of more than six spins.

Say the qualifying numbers' initial two shows were on the first and seventh spins, that is a 'gap' of 6 and the third qualifying show came up on the 19th spin, that is a 'gap' of 12 spins, then the DIFFERENCE in the 'gaps' of 6 & 12 = 6. The number is playable!

Again, suppose the initial two shows are on the first and third spins, that is a 'gap' of 2 and the third show is on the twelfth spin, that is a 'gap' of 9, so the DIFFERENCE in the 'gaps' of 2 & 9 = 7 or greater than 6. The number does not qualify to be played!

Another example, suppose the initial two shows are on the first and tenth spins, that is a 'gap' of 9 and the third show is on the twentieth spin, that is a 'gap' of 10, so the DIFFERENCE in the 'gaps' of 9 & 10 = 1. Playable!

**BETTING STRATEGY:**

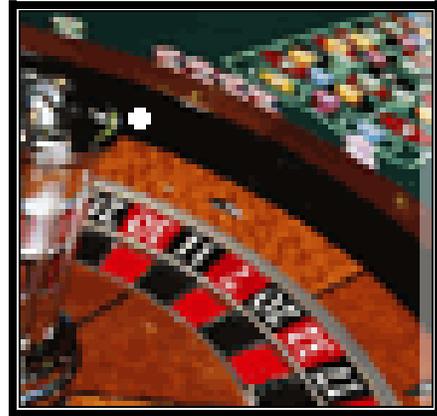

- a. Back a playable qualifying number for UP TO 13 spins. Of course zero can also qualify to be playable.
- b. Bet two units straight up on the first to the sixth playable spin and one unit on the seventh to the thirteenth spin.
- c. If the string of thirteen bets all fail to achieve a win stop betting that number immediately. You have lost 19 chips.
- d. STOP backing that number immediately a bet WINS, that is when your HOT GOLD number shows for the FOURTH time and your string is complete.
- e. Should three successive playable strings each of thirteen bets all lose stop playing that wheel for now. You have lost 57 chips, and that hurts, and conditions are not favouring our strategy and we will not play that wheel again until we have witnessed a successful string of four numbers show or until the next day.
- f. If you have lost two strings of thirteen bets and are playing a third when a another number qualifies as playable

**How to financially benefit from a little known unbelievable strategy!**

DON'T commence betting on it. Either you win your currently active string or you walk away.

A final word of advice –

**“Whatever you think will not happen on a Roulette Wheel will happen and you will be amazed”**
